

Jeffrey M Kriseman is the Public Health Informatics Scientist with the Southern Nevada Health District, responsible for providing leadership, strategic direction, development and implementation of public health informatics solutions. Jeffrey has been instrumental in the development of critical infrastructure supporting disease investigation, and electronic messaging, which has been recognized at the national stage.

Jeffrey also actively conducts research in genomics, pharmacogenomics, and clinical informatics as a Research Associate in Translational Genomics with Arizona State University. He received a Bachelor's degree in Information Technology, a Master's degree in Biomedical Informatics, and will be graduating this fall with a PhD in Biomedical Informatics from Arizona State University.
